## PROJECTS

---

**file sharing using QR code** *python module - pyqr , and ftp protocol from OS module*

<https://github.com/aniruddha8972/file-sharing-QR-generator>

A file QR code converter is an advanced platform that converts any file into scannable QR codes. This transforms file-sharing. Now, you can share and access resources seamlessly and efficiently. With just one scan, anyone can view and download the embedded file straight to their devices.

**Voice assistant using python libraries daily trending news reader** *google module , Wikipedia module , os module , pyttsx module, using ssapi -5 female for voice generation*

<https://github.com/aniruddha8972/voice-assistant>

With the use of voice assistants, we can automate the task easily, just give the input to the machine in the speech form and all the tasks will be done by it from converting your speech into text form to taking out keywords from that text and execute the query to give results to the user.

**Fashion Recommendation System** *sklearn ml modules , NLP*

<https://github.com/aniruddha8972/fashion-Recommendation-System>

We require a dataset of fashion product data to construct a fashion recommendation engine. We obtained information about Kurtis from Myntra that we may utilize to develop a Python-based fashion recommendation engine.

**Online Examination System** *django , python , HTML , CSS , Bootstrap*

<https://github.com/aniruddha8972/online-examination-system>

Online Examination System is a technology-driven way to simplify examination activities like defining exam patterns with question banks, defining exam timers, objective/ subjective question sections, and conducting exams using a computer or mobile devices in a paperless manner.

**Sybil Attack detection and prevention (ongoing research paper)** *cyber security technology* (09/2023 - Present) ongoing research work

The Sybil attack in computer security is an attack wherein a reputation system is subverted by creating multiple identities. we are trying to build a detection system using machine learning algorithm which predict accurately the network traffic.
